

Rusting

Practical:

Design an experiment to prove that oxygen and water are needed for rusting to occur and that salt increases the rate of rusting

Equipment
My Prediction
Method
Results
Conclusion

Include the following sections

You will need:

Some nails

A range of liquids for example water, vinegar, oil, Orange juice.

Lots of patience!

Diagram,

Method

Prediction,

Evaluation.

Include the following sections

Diagram – Draw a clear, labelled diagram to show how you will conduct your experiment.

Method – Just like instructions explain how you will conduct the experiment.

Prediction – Predict what you think the outcome will be to the experiment.

Include the following sections

Evaluation – Describe the results to your experiment, giving reasons for the outcome.
