Interpreting One-to-One Pictograms **Answers**

To use a one-to-one pictogram to answer questions.

Days of Sunshine Pictogram

 = 1 Day

How many days of sunshine did each month have?

October

4

January

5

November

3

February

5

December

6

Which month had the **most** sunny days?

December

Which month had the **least** sunny days?

November

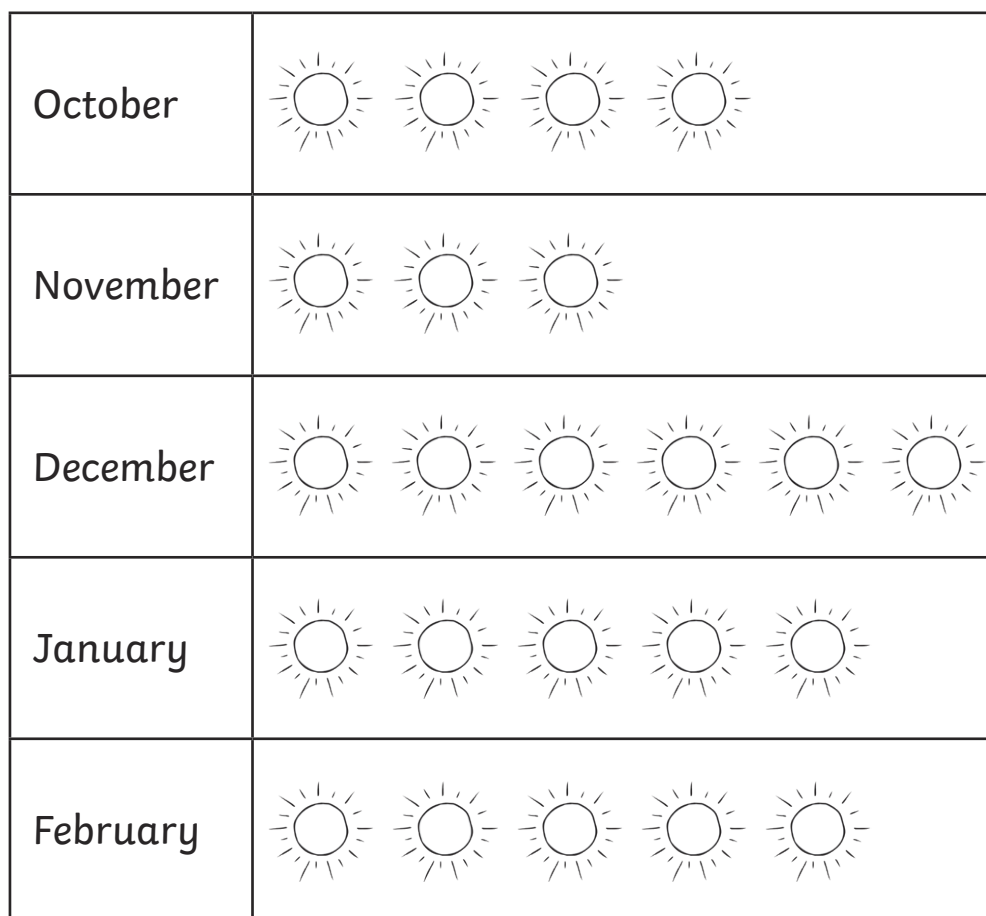

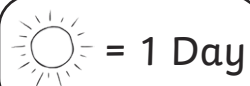

Which months had the **same** number of sunny days?

January and February

Interpreting One-to-One Pictograms **Answers**

To use a one-to-one pictogram to answer questions.

Days of Sunshine Pictogram

Which month had the **most** sunny days?

December

Which 2 months had the **same** number of sunny days?

January and February

How many sunny days were there in December, January and February altogether?

16

How many more sunny days were there in December than November?

3

How many fewer sunny days were there in November than February?

2

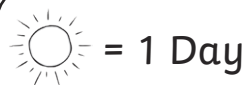

November was the least sunny month. Do you agree? Explain why.

Yes because November only had 3 days of sun, which is fewer days than any of the other months.

Interpreting One-to-One Pictograms Answers

To use a one-to-one pictogram to answer questions.

Days of Sunshine Pictogram

October	   
November	  
December	     
January	    
February	    

Which months had **fewer** than 5 sunny days?

October and November

What's the difference between the number of sunny days in December and November?

3

How many sunny days were there in December, January and February altogether?

16

Which had the most sunny days: November and December together or January and February together? Explain how you know.

January and February had 10 sunny days in total and November and December had 9 sunny days in total.

January and February together had the most sunny days.

March had 10 days of sunshine. Explain how this would be shown on the pictogram.

A new row labelled March would need to be added at the bottom of the pictogram, and 10 sun symbols would need to be drawn to represent the 10 sunny days.
